

## APPLICATIONS

The SPM-D21 is a microprocessor-based synchronizer designed for use on three phase AC generators equipped with Woodward or other compatible speed controls and automatic voltage regulators. The SPM-D21 provides automatic frequency, phase and voltage matching using either analog or discrete output signals.

It combines synchronizing for a generator circuit breaker (GCB) and a mains circuit breaker (MCB), load and power factor control, and generator and mains protection.

## DESCRIPTION

### Synchronizing

- Separately for GCB and MCB
- Phase match or slip frequency synchronization with voltage matching
- Two-phase sensing of generator, bus, and mains
- Selectable operating modes like SPM-A (Run, Check, Permissive, and OFF)
- Synchro-check possible
- Synchronization time monitoring

### Mains parallel operation

- Real power control
- True RMS power calculation
- Generator real power setpoint by parameter (2 values) or via 0/4 to 20 mA
- Soft shutdown
- Power factor control
- Power factor setpoint by parameter

### Isolated operation

- Frequency control
- Voltage control

### Dead bus operation

- Closing of GCB or MCB on demand
